# PROJECT OVERVIEW

WIN-Z is a concept platform designed to help university students connect, share their creative work, access study resources, and support each other's learning journey.

The idea came after several conversations with my sister about the challenges students face in finding one organized place for projects, study materials, discussions, and creative collaboration. Those discussions inspired me to explore the problem from a UX perspective and transform it into a complete digital product.

Throughout this project, I designed the complete user experience, user interface, responsive layouts, and interactive prototype, focusing on creating an engaging, intuitive, and easy-to-use platform that encourages learning, collaboration, and creativity.

The platform includes dedicated sections for projects, discussions, study materials, challenges, and personal profiles, providing students with a centralized place to learn, showcase their work, and communicate with their peers.

## Note:

The profile information, names, and sample content used throughout the prototype are placeholder data created only to simulate a realistic user experience.

# KEY FEATURES

- Landing Page
- Authentication
  - Create Account
  - Log In
- Home
  - Browse Projects
  - Project Details
  - Upload Project
- Community
  - Discussions
  - Comments
- Challenges
- Notes & Resources
- Study
- User Profile
- Responsive Design
- Interactive Prototype

# MY ROLE

This project was fully designed by me.

Responsibilities included:

- UX Planning
- Information Architecture
- User Flow Design
- Wireframing
- High-Fidelity UI Design
- Responsive Layout Design
- Interactive Prototype
- Design System & Components

Tools Used

- Figma

Figma Design:
